TECH SKILLS

Security

SIEM development, IDS/IPS, honeypots, MITRE ATT&CK, threat intelligence, SOAR automation, vulnerability management, security log analysis, Kali Linux, Nmap, Metasploit, Wireshark, Python security automation

Programming Languages

JavaScript, Python, Golang, Java, Rust

Frontend

HTML, CSS, React, Next.js, TypeScript

Backend & APIs

FastAPI, REST APIs, GraphQL, WebSockets, JWT authentication

Networking

Defense in Depth, firewalls, ACLs, VLANs, IPsec, VPN, AAA, Syslog, NTP

Databases

MySQL, SQLite, PostgreSQL

Data Science & Machine Learning

scikit-learn, Pandas, NumPy, Matplotlib, anomaly detection, Isolation Forest

Tools & Platforms

Git, GitHub, Postman, CLI, Jupyter Notebook, Docker, Azure

SUMMARY

Cybersecurity-focused ICT graduate from Bahrain Polytechnic, with completed full stack software development training at Reboot Coding Institute. Strong foundation in cybersecurity, programming, networking, and backend development, supported by hands-on experience building web applications and security-focused projects. Skilled in developing practical solutions such as SIEM systems, honeypot systems, secure networks, vulnerability automation tools, and backend applications. Combines cybersecurity knowledge with practical coding skills developed through academic, training, and real-world projects.

WORK EXPERIENCE

IT Security Internship Feb 2026 — Jun 2026

Al Salam Bank, Manama, Bahrain

Supported IT Security operations in a banking environment using tools such as Trend Micro, Qualys VMDR and CA, Imperva, Postman, and GitHub. Assisted with asset monitoring, endpoint security, email quarantine handling, vulnerability scanning, patch management, and vulnerability tracking. Helped improve asset visibility by identifying duplicate agents, reviewing endpoint coverage, and monitoring suspicious email gateway activity.

Developed **VulnSight**, an internal vulnerability management platform that automated the team's weekly Qualys vulnerability reporting process, replacing manual Excel and PowerPoint workflows. Delivered to end users via Microsoft Teams.

EDUCATION

Polytechnic Bahrain Sep 2022 — May 2026

Bachelor in ICT, Cyber Security

Reboot01 Coding Institute Nov 2023 — Mar 2026

Full Stack Developer Diploma in Cybersecurity Specialization

High School Diploma Sep 2018 — May 2022

Al Rawabi Private School

Personal Skills

- Clear communication and teamwork
- Strong problem-solving and analytical thinking.
- Effective time management and task prioritisation
- Adaptability and willingness to learn.
- Ability to perform well under pressure

LANGUAGES

- Arabic - Native
- English - Fluent

CERTIFICATIONS AND LICENSES

Bachelor's Degree in ICT, Cyber Security — Bahrain Polytechnic

GPA: 3.64

Full Stack Developer Diploma/Cybersecurity Specialization — Reboot Coding Institute

IELTS Achieved a Score of 6.5

BH National CTF

Level Up Your Static Analysis Skills with STRELKA

PROJECTS

VulnSight – Internal Vulnerability Management Platform – React, FastAPI, PostgreSQL, AWS

Designed and developed a full-stack vulnerability management platform for a banking institution, replacing a manual Excel and PowerPoint reporting process. Automated Qualys CSV processing with QID enrichment, IT action classification, SLA tracking, and branded PDF/Excel/PPT report generation. Implemented JWT authentication with role-based access control. Subsequently migrated to AWS serverless infrastructure by a cloud team, expanded with an AI assistant, and deployed via Microsoft Teams.

SentinelAI – Full-Stack AI-Assisted SIEM Platform – Python, FastAPI, React, scikit-learn, WebSockets, SQLite, JWT, Docker

A full-stack AI-assisted SIEM platform with real-time log ingestion, a 14-rule MITRE ATT&CK detection engine, ML anomaly scoring, and an automated SOC dashboard with threat intelligence and SOAR remediation.

AI-Powered Honeypot Threat Detection System – Python, Cowrie, Suricata, Machine Learning

Built a honeypot-based system to capture and analyze real-world cyberattacks. Used Cowrie and Suricata for monitoring, processed logs with Python, applied machine learning for attack classification, and visualized results using a SOC-style dashboard.

Social Network - Go, JavaScript, SQLite, Docker

Developed a full-stack social network using Go (Golang), Next.js, SQLite, Docker, WebSockets, and SSE with features like authentication, posts with privacy levels, follow requests, real-time chat, notifications, groups, and events.

GraphQL Profile Dashboard – JavaScript, GraphQL, SVG

Developed a profile web application using GraphQL to securely fetch authenticated user data. Implemented JWT-based authentication and created SVG-based graphs to visualize user progress and statistics.
